[Stellite Wallet Tutorial For Mac](#)

Me and TayIor Gerring (Hive waIlet) coded this example wallet in 2 days in real Python.

Not marketing any coins and simply performing it to help the network I at one time had more than 300gpus exploration ETN, I possess sense sold all the GPU mining rigs and working 100% Asic miners.. Not all asic miners are usually dumping and we perform not actually know the overall number but I would state we had more cash being left when GPU exploration was permitted on the system due individuals making use of nicehash to mine and instant dump.. Hyc altered ccminer and wolf'h AMD miner to be capable to perform solo mining. Currently have got (50) X3 CryptoNight Asic miners mining ETN 24/7 pushing nicely over 12ml/s and have got long been averaging about 25,000 etn per day.. It uses python-obelisk and is definitely designed to be be an example for additional programmers to recognize how wallets and handbags function.
